

TINKERING WITH AYA AND RUST

for fun and profit

Jeremy Sztavinovszki

Repo @ https://github.com/if-loop69420/pg_aya_tinkering

WHAT IS AYA?

- A pure Rust library for eBPFs not relying on libbpf or bcc
- Only uses the libc crate for syscalls

WHAT IS eBPF?

- extended Berkley Packet Filters
- Successor to BPF (Berkley Packet Filters)
- Add kernel functionality without modules/source code changes

- extended Berkley Packet Filters
- Successor to BPF (Berkley Packet Filters)
- Add kernel functionality without modules/source code changes

Basically

It's a technology that can run programs in a privileged context.

SO WHAT CAN YOU DO WITH THAT?

- Aya has support for:
 - XDP
 - LSM
 - Probes
 - Tracepoints

LET'S GET TO DEMOS!

THANK YOU FOR YOUR ATTENTION!
